

Bitcoin Market Intelligence — Model 8

Executive Summary

Date: 2026-09-29
Final Signal (T+1): **NO_TRADE**
Confidence: 0.57
Volatility Regime: 0
Macro Regime: 0

Strategy Snapshot ($\tau = 0.60$)

Model 8 Strategy Total Return: -88.2%
Buy & Hold BTC Total Return: 44.4%
Strategy Sharpe: -0.86 | Buy & Hold Sharpe: 0.33
Max Drawdown (Strategy): -89.9% | Max Drawdown (Buy & Hold): -76.6%
Win Rate: 47.1% | Trade Coverage: 32.2% (fraction of days with a position)

2026-09-29: signal=NO_TRADE, eff=NO_TRADE, conf=0.57, ret=0.00%

Methodology Note

Model 8 is a regime-aware meta-ensemble that combines volatility (Model 2), price dynamics (Model 1), derivatives flow (Model 3), on-chain fundamentals (Model 4), and macro/liquidity (Model 6). A regime selector (8A) first filters for tradable environments based on volatility and macro regimes, and a directional classifier (8B) then chooses LONG / SHORT when confidence exceeds τ . Performance metrics are computed on daily close-to-close returns.
