Bitcoin Market Intelligence — Model 8

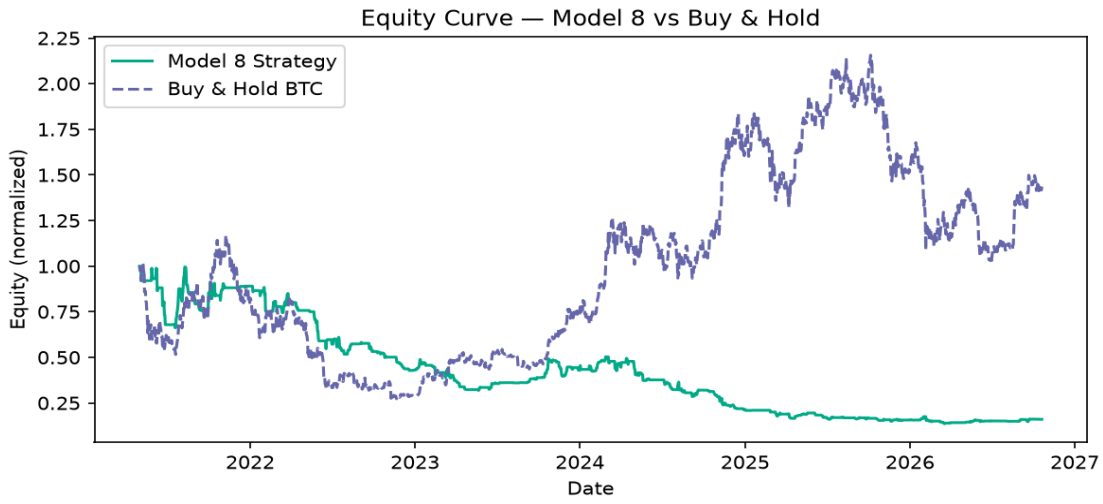

Executive Summary

Date: 2026-10-20
Final Signal (T+1): **NO_TRADE**
Confidence: 0.64
Volatility Regime: 0
Macro Regime: 1

Strategy Snapshot (τ = 0.60)

Model 8 Strategy Total Return: -83.9%
Buy & Hold BTC Total Return: 43.6%
Strategy Sharpe: -0.74 | Buy & Hold Sharpe: 0.33
Max Drawdown (Strategy): -86.3% | Max Drawdown (Buy & Hold): -76.6%
Win Rate: 47.5% | Trade Coverage: 31.5% (fraction of days with a position)

Methodology Note

Model 8 is a regime-aware meta-ensemble that combines volatility (Model 2), price dynamics (Model 1), derivatives flow (Model 3), on-chain fundamentals (Model 4), and macro/liquidity (Model 6). A regime selector (8A) first filters for tradable environments based on volatility and macro regimes, and a directional classifier (8B) then chooses LONG / SHORT when confidence exceeds τ. Performance metrics are computed on daily close-to-close returns.
